

IFRS V/S US GAAP

CFA LEVEL I – 2025 EXAMS

ABOUT THE AUTHOR - VINIT MEHTA (CA, FRM & CFA L2)

Prof. Vinit Mehta is a qualified Chartered Accountant & Financial Risk Manager (F.R.M.) and has earned CFA Level II badge.

He has 12+ years of work experience across various finance verticals, such as:

- Investment Banking | Corporate Banking | International Banking | Structured Financing
- Deals à Oppo/Vivo | Arcelor Mittal-Essar Steel | NTPC + Hyundai Engg. | ICICI-DCM

He has 5+ years of academic experience in teaching finance:

- Visiting faculty @ NMIMS and SP Jain
- Teach & mentor finance through CFA | FRM | Financial Modelling

Exam questions will be based International Financial Reporting Standards (IFRS), unless otherwise specified. When a question is based on U.S. GAAP, it will be indicated in the question.

IFRS	US GAAP
Introduction	
International Accounting Standard Board (IASB) prescribes IFRS	Financial Accounting Standard Board (FASB) prescribes US GAAP
<u>Income statement</u>	
Income statement or OCI can be presented together or separately	Income statement or OCI can be presented together or separately
Outcome of long-term contract estimated reliably Revenue,	Outcome of long-term contract estimated reliably
exp & profit are recognised as the work is completed. If a loss is expected, recognise immediately.	Revenue, exp & profit are recognised as the work is completed. If a loss is expected, recognise immediately.
Construction interest to be capitalised	Construction interest to be capitalised
Research cost expense it in income statement	Research cost expense it in income statement
Development cost capitalise it as an asset on the balance sheet	Development cost expense it in income statement Exception: Software – capitalise it as an asset on the balance sheet
Balance Sheet	
Financial assets include – investment securities (stocks & bornotes receivable	
Loans to, notes receivable and unlisted equity shares are va GAAP	llued at historical cost on balance sheet for IFRS & US

income statement – treatment is same as TRADING	The Securities
securities under US GAAP	
Only Listed equity securities at the time of purchase can	Listed equity securities cannot be classified as AFS – they
FOREVER be CHOSE to recognised at fair value and	are only classified as TRADING securities. No option
unrealised gains / losses recognised in OCI → Classified as	given here
securities measured at fair value through OCI – treatment	
is same as AFS under US GAAP	

IFRS	US GAAP
Financial assets not falling in any of the above category –	-
valued at fair value and unrealised gains / losses	
recognised in income statement → Classified as securities	
measured at fair value through income statement	
Financial assets at the time of purchase can FOREVER be	No such choice under US GAAP
CHOSE to be recognised at fair value and unrealised gains /	
losses recognised in income statement → Classified as	
securities measured at fair value through income	
statement	
However, for all of above, dividend or interest income or REA	ALISED gain / losses are recognised in income statement
<u>Cashflow statement</u>	
Interest paid can be classified in CFO or CFF	Interest paid is classified in CFO
Interest income recd. can be classified in CFO or CFI	Interest income recd. is classified in CFO
Dividend income recd. can be classified in CFO or CFI	Dividend income recd. is classified in CFO
Dividend paid can be classified in CFO or CFF	Dividend paid is classified in CFF
Taxes reported as operating activity unless it is related to	All taxes paid are part of CFO, even tax related to
investing or financing activities	investing or financing transaction
Not required under IFRS	Firms using direct method presentation, must also
	disclose indirect method presentation
Bank overdraft considered part of cash equivalents i.e.	Bank overdraft considered part of CFF
cash balance itself	
Inventories	
Specific identification, FIFO & Weighted average cost	Specific identification, FIFO, LIFO & Weighted average
	cost
Valued @ lower of cost or NRV – for all above methods	Valued @ lower of cost or NRV – for all above methods
	except LIFO or retail method
	For LIFO or retail method – lower of cost or Market.
	✓ Market = replacement cost; if replacement cost
	is in the range of NRV or NRV minus profit
	✓ Market = NRV; if replacement cost > NRV
	✓ Market = NRV minus profit margin; if
	replacement cost < NRV minus profit margin
	✓ Shortcut → Market is always the middle value
	amongst NRV, replacement cost, and NRV minus
	profit margin – put these numbers in ascending
	order and you get the middle value which is the
	Market. Now compare this Market with Cost and
Write down by recognising less in income statement	use the smaller number as value of inventory.
Write down by recognising loss in income statement	Small write down amount – recognise by increasing COGS
Subsequent Write-up – recognise gain by decreasing COGS	Large write down amount – recognise loss No write ups allowed
to extent of earlier loss	ivo write ups allowed
Change in inventory method – firms to demonstrate that	Change in inventory method – firms must explain why
change will provide reliable & more relevant info.	the change is preferable
Change will provide reliable & Hore relevant lino.	the change is preferable

Where, NRV = fair value less selling cost	Where, NRV = fair value less selling cost
Impairment loss = carrying value minus NRV	Impairment loss = carrying value minus NRV
Reversal:	Reversal:
If value recovers in future, impairment loss can be reversed	If value recovers in future, impairment loss can be
to the extent of loss recognised earlier	reversed to the extent of loss recognised earlier
	This is the only place in HC CAAD where provided in
	This is the only place in US GAAP where reversal is
	allowed

Cost Model allowed:

Amortized cost = Original capitalised cost <u>minus</u> accumulated depreciation / amort / depletion / impairment

Cost Model (IFRS & US GAAP)

IFRS	US GAAP
Lease accounting	
In the books of lessee:	In the books of lessee:
All the lease to be classified as finance lease, except short term lease of less than 12 months or where the PV of lease payment is less than \$5,000	 If either of the following circumstances exist, classify the lease as finance lease: The lease transfers ownership of the underlying asset to the lessee or The lessee has an option to purchase the underlying asset and is reasonably certain it will do so The lease term is for a major part of the asset's useful life The present value of the sum of the lease payments equals or exceeds substantially all of the fair value of the asset The underlying asset has no alternative use to the lessor
In the health of leases (Finance lease)	operating lease
In the books of lessee (Finance lease) At inception:	In the books of lessee (Finance lease) At inception:
At meepton.	At meephon.
Recognise lease liability = PV of lease payment Recognise 'Right of Use' asset = PV of lease payment	Recognise lease liability = PV of lease payment Recognise 'Right of Use' asset = PV of lease payment
Over the term of lease:	Over the term of lease:
Charge depreciation on ROU asset Recognise interest expense = lease interest rate x Beginning lease liability	Charge depreciation on ROU asset Recognise interest expense = lease interest rate x Beginning lease liability
Interest expense → CFO	Interest expense -> CFO
Principal repaid → CFF In the books of lessee (Short-term or Low-value lease)	Principal repaid → CFF In the books of lessee (Operating lease)
At inception:	At inception:
No asset or liability is reported	Recognise lease liability = PV of lease payment Recognise 'Right of Use' asset = PV of lease payment
Over the term of lease:	Over the term of lease:
No depreciation expense or interest expense recognised Only lease rental expense recognised in income statement Lease rental expense → CFO	No depreciation expense or interest expense recognised Only lease rental expense recognised in income statement
	Each year lease liability is reduced by 'lease rental expense minus effective interest component'
	Each year ROU asset is also reduced by the same amount as lease liability

IFRS	US GAAP
	At end of lease, both lease liability & ROU asset becomes zero
	Lease rental expense → CFO
In the books of lessor:	In the books of lessor:
Classify either as finance lease or operating lease	US GAAP requires the lessor to classify the lease as finance lease if any criteria is fulfilled ✓ The lease transfers ownership of the underlying asset to the lessee ✓ The lessee has an option to purchase the underlying asset and is reasonably certain it will do so ✓ The lease term is for a major part of the asset's useful life ✓ The present value of the sum of the lease payments equals or exceeds substantially all of the fair value of the asset ✓ The underlying asset has no alternative use to the lessor None of the criteria's fulfilled, it is classified as operating lease
In the books of Lessor:	In the books of Lessor:
If there is transfer of ownership → classify as finance lease (treatment is same as Sale type method used in US GAAP)	If it is finance lease:
Operating lease (treatment is same as Operating lease used in US GAAP)	At inception: No effect on income statement
	Balance sheet effect: Remove asset by carrying value and create lease receivable = PV of lease payment
	No effect on cashflow statement
	Over the term of lease:
	Income statement effect: No depreciation Recognise interest income: lease interest rate x beginning balance of lease receivable
	Balance sheet effect: Reduce lease receivable by principal repaid which is equal to lease rental minus interest expense
	Cashflow statement effect: Interest income → CFO Principal repaid → CFO

IFRS	US GAAP
	If it is classified as operating lease
	At inception:
	No effect on income statement
	Balance sheet effect:
	No removal of asset
	No effect on cashflow statement
	Over the term of lease:
	Income statement effect:
	Recognise lease rental income and Charge depreciation as usual
	Charge depreciation as usual
	Balance sheet effect:
	Reduce asset by depreciation amount – amortised cost
	Cashflow statement effect:
	Lease income → CFO
Pension accounting	
Pension → Components leading to changes in net pension	Pension → Components leading to changes in net
asset or liability that go directly to equity as OCI are NOT	pension asset or liability that go directly to equity as OCI
amortised.	are amortised to income statement

Share-based compensation accounting

Outright grants without condition or restrictions

Vesting happens immediately (Vesting date = Grant date)

On grant date:

- Recognise the fair value of stocks as expense – reduce retained earnings and
- increase the additional paid-in capital by the same amount

No cash transactions and does not affect cashflow statement (just like dep.)

Outright grants with restrictions (a.k.a. RSUs) or Performance shares

Say, \$9 mn worth grant over 3 years

On grant date:

- increase the additional paid-in capital by the entire fair value (eg., \$9 mn)
- Increase the contra account to equity (Unearned compensation) by entire fair value of stocks (eg., \$9 mn)

Spread the fair value over the service period (\$3mn each year):

 Reduce the contra-account (\$3mn) and recognize the expense (\$3mn), reduce the retained earnings

No cash transactions

Stock options

Say, 0.9mn options, 33% vested every year over 3 years. Fair value is \$5 and exercise price is \$10 - total is \$15

On grant date: No entry (unless immediately vested)

Upon vesting (at end of every year):

- recognize the expense (0.3mn x \$5), reduce the retained earnings and increase additional paid-in capital by same amount
- Total \$4.5mn recognized over 3 years When actually exercised at \$10 per share
- Increase the cash by \$9mn (\$10 x 0.9mn)
- Increase the paid-in capital by \$9mn

Actual share market price on any date does not matter

SARs

SARs are valued at fair value and compens ation expense is allocated over the service period of the employee

IFRS	US GAAP
Financial Reporting Quality	
 Usage of non-IFRS measures, IFRS requires: Explaining the relevance of such non-IFRS measure Reconcile difference between non-IFRS & comparable IFRS measure 	 Usage of non-GAAP measures, US GAAP requires: Display the most comparable GAAP measure with equal prominence Explain as to why non-GAAP measure is useful Reconcile difference between non-GAAP & comparable GAAP measure Disclose other purposed for using non-GAAP measure Include any item that are likely to occur in future even if reported as non-recurring
Income taxes	
There is no specific mention of reporting DTL and DTA separately under IFRS. Usually, companies report separately.	US GAAP requires DTL & DTA to be reported separately and are not to be netted
IFRS requires creation of DTA when the it is 'probable' that sufficient taxable income will be available to recover the tax assets in the form deductions. If it is less probable, reduce DTA and create Valuation allowance	US GAAP mentions that if the probability of non-reversal is more than 50%, than reduce DTA and create Valuation allowance.
Revaluation of fixed & intangible assets - Deferred taxes are recognised in equity	No revaluation allowed
Deferred tax asset recognition - Recognised if "probable" that sufficient tax will be available to recover the tax asset	Deferred tax asset recognition - Recognised in full and then reduced if "more likely than not" that the assets will not be realised
Tax rate used to measure deferred tax - Enacted or substantially enacted rate	Tax rate used to measure deferred tax - Enacted tax rate
Deferred taxes are classified as non-current on balance sheet	Deferred taxes are classified as current or non-current based on the underlying asset or liability
Undistributed profit from an investment in subsidiary or JV → Deferred taxes are recognized unless the parent or venturer is able to control distribution/sharing of profit & it is probable that temp. diff. will not be reversed in future	Undistributed profit from an investment in subsidiary or JV → No deferred taxes that meet indefinite reversal criterion
Undistributed profit from an investment in associate → Deferred taxes are recognized unless the investor is able to control sharing of profit & it is probable that temp. diff. will not be reversed in future	Undistributed profit from an investment in associate → Deferred taxes are recognized from temporary differences
